

CineHaven Movie Explorer

Project Report

1. Introduction

CineHaven is a web application designed to make discovering and managing movies easy and enjoyable.

Users can:

- Browse trending films
- Search for specific titles
- Filter by genre, rating, or release year
- Organize movies into personal watchlists
- Admins have additional capabilities to add movies.

2. Project Objectives

The main goals of Movie Explorer are:

- Provide a simple and enjoyable way for users to explore movies.
- Allow users to organize movies using personal watchlists.
- Implement an intuitive and responsive design that works across devices.
- Demonstrate practical skills in frontend development using React and Tailwind CSS.

3. Technologies Used

- **React:** For building a dynamic, component-based frontend.
- **Tailwind CSS:** For styling and responsive layouts.
- **HTML5:** Base structure of web pages.
- **Mock JSON Data:** For movie and user data.
- **Local Storage:** For user sessions.

4. Application Structure

The application consists of the following main pages:

1. **Home Page** – Displays popular, recommended, and newly released movies.
2. **Movies Page** – Shows all movies with search and filter by genre, rating, or release year.
3. **Movie Details Page** – Full information about each movie, including trailer, description, cast, and watchlist options.
4. **Dashboard** – Provides visual statistics on watched vs unwatched movies and genres in the user's watchlist.
5. **Profile Page** – Displays user information, watchlist, and watched movies.
6. **Add Movie Page (Admin)** – Form for admins to add new movies to the database.
7. **Authentication Pages** – Login and Sign-up pages for users to access their profile and therefore the web application with their personalized information.

5. Key Features and Functionality

5.1 Home Page

- Hero banner highlighting the last four added movies.
- Popular movies section filtered by high ratings.
- Personalized recommendations based on watched genres.
- Newly released movies for recent content discovery.

5.2 Movies Page

- Complete movie catalog with search and filtering capabilities.
- Filters include genre, release year, and rating range.
- Users can mark movies as watched or add them to their watchlist.

5.3 Movie Details Page

- Displays detailed information including title, poster images, rating, release date, genre, and description.
- Embeds the official trailer and lists cast members.
- Users can add/remove the movie from their watchlist.

5.4 Dashboard

- Shows recently added movies to the user's watchlist.
- Charts display watched vs unwatched movies and distribution of genres in the watchlist.
- Interactive interface allows quick updates to movie status.

5.5 Add Movie Page

- Admins can add or edit movies with details including title, year, rating, description, posters, trailer link, genres, and cast members.
- Supports multiple genres and multiple cast entries dynamically.

5.6 Role-Based UI

- Users can see personal watchlists, watched movies, and recommendations.
- Admins have additional privileges, such as adding movies to the system.
- Secure login and signup system manages user authentication.

6. UI & UX Design

- **Responsive Layout:** Works across mobile, tablet, and desktop.
- **Clean Design:** Movie cards with hover effects, readable typography, and visually appealing color schemes.
- **Intuitive Navigation:** Simple and consistent menus for seamless user experience.
- **Interactive Elements:** Buttons, filters, and charts provide instant feedback to users.

7. Conclusion

Movie Explorer successfully combines movie discovery, watchlist management, and visual insights into one web application. The project demonstrates the effective use of React and Tailwind CSS to build interactive and responsive pages while keeping the user experience central.
