

CineHaven

Movie Discovery &
Watchlist Management App

Project Overview

CineHaven is a UI-based web application for discovering and managing movies.

Users can browse, search and filter movies.

Users can manage personal watchlists and track watched movies.

Only admins can add movies from the “Add Movie” form.

Objectives

- 01 Provide an easy and enjoyable movie discovery experience.
- 02 Allow users to organize movies using watchlists.
- 03 Apply UI/UX principles with a responsive design.
- 04 Practice React and Tailwind-based frontend development.

Technologies Used:

React

Tailwind CSS

HTML5

Mock movie data (JSON)

Local Storage for user sessions

Application Pages

Sign Up Page

Login Page

Home Page

Movies Page

Movie Details Page

Dashboard

Profile Page

Add Movie Page (Admin only)

01

Sign up Page

- Allows new users to create an account.
- Collects basic user information.
- New users are assigned a default role (normal user).
- User data is stored for future authentication.

02

Login Page

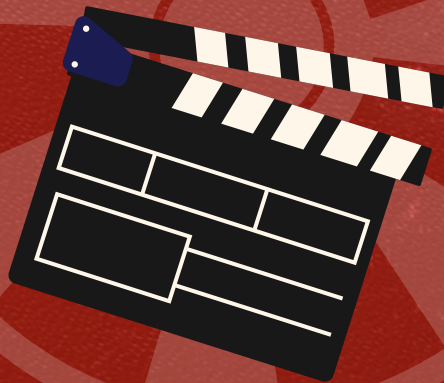

- Allows existing users to access the application.
- Users enter email and password.
- Credentials are validated using mock user data.
- Successful login creates a session using Local Storage.

03

Home Page

- Displays recently added movies.
- Highlights popular and recommended movies.
- Provides quick access to movie sections.
- Designed for easy navigation.

04

Movies Page

- Displays all available movies.
- Allows searching by movie title and release year.
- Supports filtering by genre and rating.
- Helps users find movies quickly.

05

Movie Details Page

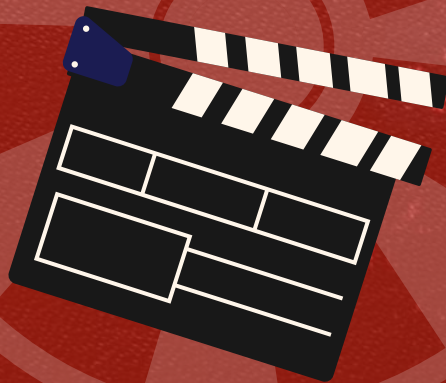

- Displays full information about a selected movie.
- Shows movie poster, title, genre, rating, and description.
- Allows users to add or remove the movie from their watchlist.
- Includes trailer and cast section for a complete movie experience.

06

Dashboard

- Shows recently added movies.
- Displays watched vs unwatched movies.
- Visualizes movie data using charts.
- Helps users track their activity.

07

Profile Page

- Displays user information.
- Allows users to edit their profile.
- Shows watchlist and watched movies.
- Personalized for each user.

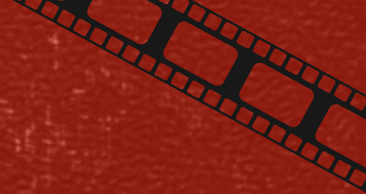

08

Add Movie Page

- Accessible only by admin users.
- Allows adding new movies through a form.
- Helps manage movie content.
- Demonstrates role-based UI.

UI/UX Design

- Responsive design for different screen sizes.
 - Clean layout and clear navigation.
-
- Interactive movie cards and hover effects.
 - Focus on user-friendly experience.
- 
- 
- 
- 

Conclusion

- Movie Explorer provides a complete movie discovery experience.
- Users can explore, track, and manage movies in a simple and organized way.
- The project focuses on clean UI, usability, and user interaction.
- It demonstrates practical frontend development using modern tools.

Thank You!
